STeeper than 5.5:1.

Slopes adjacent to median openings shall not be steeper than 5.5:1.

Type III median openings are used for major side roads, state route, and major commercial entrances. Special sheet.

General notes:
All dimensions are typical.

Storage is determined by traffic analysis based on number of turning vehicles likely to arrive in an average 2-minute period within the peak hour. Two vehicle minimum should be provided.

Median design is dependent on median width, design speed, and departure angle.

Median openings and tapers shall be constructed of the same material and thickness as the traveled way.

Shoulders adjacent to the median opening and tapers shall be 2' shoulders for interstate and major roadways or 4' shoulders for low volume majors and minor roads.

Slopes adjacent to median opening shoulders shall not be steeper than 5.5:1.
